PRO Chrome Styles

How to make a perfect chrome effect

Place the styles in order to achieve the desired result:

For example

A) Apply the *1.* style to a Text or a Shape
B) Duplicate the layer
C) Apply the *2.* style

There are two layer style for each final chromed effect

Feel free to mix the styles, you can find better or original styles

To achieve perfect results

As showed in the preview image I suggest to you:

A) Use BIG font size - Over 300 pt

B) Use from 400 to 600 font size. Than scale as you like

If you are using the Free Transform Tool don't miss to press the button

"MAINTAIN ASPECT RATIO" or the styles will be messed

To achieve a spectacular effect

As showed in the preview image I suggest to you:

1. Duplicate the final layer and set it on OVERLAY
    a. With a medium soft brush removes parts you do not like and then merge layers

2. Duplicate the final layer and add a BLUR effect (filter > Blur > Gaussian blur)
    a. With a large soft brush removes parts you do not like (Do it so that one side is blurred and another party is not blurred)- Then merge layers.

3. Duplicate the final layer and add some LENS FLARE effect (filter > Lens Flare)

Thank You.
